FOR THE CRM TEAM

Sending aranyathepark.com enquiries to your CRM

Every enquiry made on aranyathepark.com can reach your CRM within seconds of the visitor pressing Submit. The website sends each one to a **webhook URL that your CRM provides**. You don't need a login to the website, an API key, or to check the site for new leads.

1 · Visitor fills in the enquiry form and verifies their mobile number → **2 · Website** saves the enquiry under Aranya → Enquiries → **3 · Webhook** sends it at once to your URL as JSON → **4 · Your CRM** creates the lead and assigns it to sales

Set it up in four steps

1. **Create an inbound webhook in your CRM.** Most CRMs offer one, often called a lead capture URL, web-to-lead or a workflow webhook. It must accept an HTTPS POST with a JSON body. If your CRM cannot read this JSON directly, put Zapier or Make (a "Catch Hook") in between to map the fields.
2. **Map the fields** listed on page 2 to your lead fields. Use `lead_id` as the external ID, so the same enquiry is never created twice.
3. **Send the webhook URL to the website team.** They paste it into WordPress at **Aranya → Site Settings → Enquiries → CRM webhook URL** and save. Nothing else on the website changes.
4. **Test with one enquiry.** Submit the form on aranyathepark.com with the name "Test" and a working mobile number. While mobile verification is in test mode, any 6-digit code is accepted. The lead should appear in your CRM within a few seconds. Then delete it from the CRM, and ask the website team to delete it from WordPress.

What your webhook URL must handle

- **HTTPS POST** with the header `Content-Type: application/json` and a UTF-8 JSON body (one enquiry per request).
- **No custom headers or sign-in are sent.** If your endpoint needs a key, include it in the URL itself (for example `…?accessKey=…`). Most CRM capture URLs already work this way.
- **A reply within 5 seconds.** Each enquiry is sent once and is not retried, and the website doesn't read your reply.
- **One URL only.** To feed more than one system, send to Zapier or Make and fan out from there.

What each enquiry contains

```
{
  "lead_id": "ATP-MUV8S2KR",
  "full_name": "Rahul Mehta",
  "phone": "9876543210",
  "phone_verified": "yes",
  "email": "rahul@example.com",
  "configuration": "3 BHK",
  "contact_method": "",
  "message": "Prefer a high floor",
  "purpose": "Enquire — 3 BHK",
  "page_url": "https://aranyathepark.com/",
  "referrer": "https://www.google.com/",
  "utm_source": "google",
  "utm_medium": "cpc",
  "utm_campaign": "aranya-launch",
  "utm_term": "",
  "utm_content": "",
  "timestamp": "2026-10-06T09:41:12+00:00",
  "project": "Aranya The Park"
}
```

An example of one enquiry. Every value is text; a field the visitor left empty is sent as `""`.

FIELD	WHAT IT IS
`lead_id`	The website's reference, also shown to the visitor. Unique: use it as the external ID.
`full_name`	Visitor's name. Always filled.
`phone`	Mobile number: **10 digits, no +91** and no spaces. Add +91 when mapping. Always filled.
`phone_verified`	"yes" or "no". Mobile verification is in test mode for now, so "yes" does not yet confirm the number.
`email`	Optional; may be empty.
`configuration`	"2 BHK", "3 BHK" or "5 BHK" when the visitor started from that unit's button; otherwise empty.
`contact_method`	No longer asked; always empty. Kept so existing mappings keep working.
`message`	Visitor's message or preferred visit date. Optional.
`purpose`	Which button or form was used, e.g. "Book a Site Visit", "Request the Floor Plan PDF", "Enquire — 3 BHK".
`page_url`	The page the form was on.
`referrer`	The site the visitor came from, if known.
`utm_…`	Five campaign tags from the ad link (source, medium, campaign, term, content). Empty for direct visits.
`timestamp`	When the enquiry arrived, in UTC (ISO 8601). Add 5:30 for IST.
`project`	Always "Aranya The Park".

Nothing is lost

- Every enquiry is also saved in WordPress under **Aranya → Enquiries**, even if your CRM is down when it arrives.
- To bring in earlier or missed enquiries, the website team can download them from there with **Export CSV** for import into your CRM.

Access and support

- No website login is needed for this integration. If your team needs its own access later, the website team can create a separate login for you.
- Email alerts for each new enquiry can also be turned on, in the same settings page.
- Questions: contact the website team (Satyam).
